

MyNovaPilot — Master Handoff Brief v3

Complete Product Documentation — Mission Language Edition

Paste into new Claude conversation to continue

HANDOFF INSTRUCTIONS FOR CLAUDE

This is a continuation of a long product design session. Trevor Porter and Claude have been designing MyNovaPilot across an extended conversation. All work is documented below including the complete mission language system.

Product name confirmed: MyNovaPilot **Domain registered:** mynovapilot.com

Tagline: "If you can think it, you can build it." **Sub-tagline:** "Live in weeks, not months. No developer. No drama. No therapist required." **Brand positioning:** Your AI Mission Control for Building Businesses

Current status:

- ☒ Flywheel 1 — Mission Planning (Concept Blueprint) — LOCKED
- ☒ Flywheel 2 — Launch Pad Setup (Business & Domain) — LOCKED
- ☒ Flywheel 3 — Systems Check (Security & Vault) — LOCKED
- ☒ Flywheel 4 — Launch Assembly & Simulation (Build & Test) — LOCKED
- ☐ Flywheel 5 — Orbit & Mission Control (Go Live & Manage) — TO DESIGN
- ☐ Flywheel 6 — Growth Trajectory (Blastly Integration) — Placeholder
-  Design Brief — Round 1 complete, Round 2 needed
-  Pricing Brief — Round 1 sent to engines
-  Manus Build Brief — Written, ready to use
- ☐ ElevenLabs Scripts — To write

What happens next:

1. Finish Flywheel 5 — Orbit and Mission Control
 2. Design Brief Round 2
 3. ElevenLabs education scripts
 4. Pricing Round 2 after engine responses
 5. Manus builds MyNovaPilot — new fresh GitHub repository
-

THE MISSION LANGUAGE SYSTEM — LOCKED

This language runs throughout every screen, every notification, every alert, every email. It is not optional decoration — it is the brand.

The Journey Stages:

-  **Mission Brief** — tell Aria your idea (was: Idea Input)
-  **Mission Planning** — validate and score concept (was: Concept Blueprint)
-  **Systems Check** — security and vault setup (was: Security Setup)
-  **Launch Assembly** — AI builds the product (was: Build)
-  **Simulation** — automated testing (was: Pre-flight checks)
-  **Launch Clearance** — founder final approval (was: Final Approval)
-  **Lift Off** — product goes live (was: Deploy)
-  **Mission Control** — ongoing management dashboard (was: Dashboard)

The Navigation Language:

- **Mission Control** — main dashboard (was: Dashboard)
- **Flight Deck** — settings and configuration (was: Settings)
- **Launch Pad** — where new ideas begin (was: New Project)
- **Hangar** — all products stored and managed (was: Projects)
- **Fleet** — all products together (was: Portfolio)
- **Simulator** — Test Copy environment (was: Staging)
- **Orbit** — Live version (was: Live/Production)

- **Black Box** — Golden Backup (was: Golden Backup)
- **Flight Recorder** — audit log (was: Audit Log)
- **Control Tower** — health monitoring (was: Health Dashboard)
- **Status Board** — health overview (was: Health Score)
- **Cargo** — assets and files (was: Assets)
- **Communications** — notifications and alerts (was: Notifications)
- **Navigation** — the five flywheels progress (was: Progress)
- **Mission Log** — Nova Progress Journal (was: Progress Journal)

The Three Version Model — Mission Language:

-  **Orbit** — what customers see right now (was: Live)
-  **Simulator** — safe test environment (was: Test Copy)
-  **Black Box** — guaranteed restore point (was: Golden Backup)

Alert Language:

-  **Clear Skies** — all systems operational (was: All good)
-  **Weather Warning** — minor issue detected (was: Warning)
-  **Launch Paused** — critical issue, launch suspended (was: Error/Abort) — NOT Abort Launch, too alarming
-  **Launch Clearance** — approved and ready (was: Approved)
-  **Systems Locked** — Emergency Lockdown active (was: Locked)

Aria's Role: Aria is the AI co-pilot. She conducts mission briefings, guides founders through each stage, delivers morning status reports, explains issues in plain English, and is always available from the floating co-pilot button.

Aria's Morning Briefing (example): *"Good morning Trevor. All systems are green. Blastly generated 37 new leads overnight. HireReady has two employers waiting for approval. One deployment is ready for launch. Would you like to begin today's mission?"*

PRODUCT OVERVIEW

MyNovaPilot Domain: mynovapilot.com Stack: React, Drizzle ORM, MySQL

(PlanetScale/TiDB), Vercel, Supabase (auth) Built for: Non-technical founders. Zero developer knowledge required. Scope: SaaS digital products only — not e-commerce, not physical products. Design: Lovable warmth + Manus structure. Tailwind CSS + Radix UI + Shadcn/ui. Primary device: iPhone and iPad — mobile first. Build tool: Manus builds complete product. Lovable for UI refinement ongoing. GitHub: Fresh repository — mynovapilot — separate from existing novacommand.live

The Golden Rule: *“Your keys live in the vault. They never leave. The vault sends the permission, not the key.”* Inspired by: Not your keys, not your crypto.

FREE TIER — NOVA SPARK

The Launch Pad entry point. Three free mission validations per month.

- Email address only — nothing else required
- Talk to Aria — four minutes maximum
- Nova covers cost — approximately \$1.65 per user per month
- Three free validations per month

The Nova Spark Report — partially revealed:

Visible free:

- Mission Score out of 100 
- Three mission strengths 
- Market signal — Clear Skies, Weather Warning, or Storm Alert 
- One recommendation 
- Coaching per dimension — how to improve score 

Blacked out for free:

- Full competitive landscape 
- Full pricing analysis 
- Full MVP scope 
- Full Mission Blueprint 

The coaching feature: Every dimension below maximum triggers plain English

coaching explaining why and exactly what to change. The founder sees their score and a roadmap to 100. Similar to Blastly's business audit model.

Conversion prompt: *"Your mission scored 84/100. Unlock your full Mission Blueprint and begin your launch sequence for \$[price]/month."*

THE IMPORT ARCHITECTURE — Existing Products

Existing products (Blastly, HomeSnap, DateReady, HireReady) can be brought into the Fleet without rebuilding.

Six step import — Hangar Intake:

1. **Register in Fleet** — product name, live URL, GitHub repo, Vercel project, Supabase database mapped
2. **Systems Diagnostic** — automated health check on existing codebase. Plain English results.
3. **Black Box Handover** — all existing API keys moved into vault. Environment variables replaced with vault references.
4. **Flight Control Activation** — direct pushes to main branch blocked. All changes must go through Mission Control review.
5. **Simulator Created** — three version model activated: Orbit (live), Simulator (test), Black Box (backup)
6. **Control Tower Active** — product appears on Mission Control dashboard. All future changes go through Launch Assembly.

THE FIVE FLYWHEELS — MISSION LANGUAGE

FLYWHEEL 1 — MISSION PLANNING — LOCKED

Was: Concept Blueprint

Eight stages. Aria interview. Three AI engines. Three refinement rounds. 90/100 quality gate.

Aria interview — the Mission Brief:

1. New mission or existing product to bring into Fleet?
2. What is the mission — describe the product?
3. Who is the target crew — who uses this and what problem does it solve?
4. How does this mission generate revenue — what would someone pay?
5. What does mission success look like?

Engine assignment:

- Aria interview and brief: Claude
- Market research: Perplexity
- Business strategy: ChatGPT
- Consolidation and scoring: Claude + Nova Scoring Engine
- Market signal check: Perplexity

Scoring dimensions: Clarity 20%, Market Fit 30%, Technical Viability 20%, Revenue Model 20%, Competitive Advantage 10%

Mission Blueprint output: Concept summary, target customer, problem, solution, positioning statement, revenue model, pricing hypothesis, background pricing analysis, customer acquisition starting point, kill criteria, MVP scope, what MVP is NOT doing, future roadmap, estimated complexity, technical assumptions, assumptions register, domain keywords, compliance flags, competitive landscape, market signal, legal flags, AI score, confidence meter, founder approval.

Market signal — mission language:

-  Clear Skies — growing market, proceed confidently
-  Weather Warning — competitive market, proceed with clear differentiation
-  Storm Alert — significant headwinds, review before proceeding

Founder confidence checkpoint: *“Are you ready to initiate your launch sequence?”*

FLYWHEEL 2 — LAUNCH PAD SETUP — LOCKED

Was: Business & Domain Setup

From approved mission to registered connected infrastructure in under 60 seconds.

Domain search, registration, DNS auto-connected, SSL provisioned, GitHub repo created, Vercel project created, product added to Fleet registry, Control Tower monitoring begins.

Founder never touches a DNS record, nameserver, or SSL certificate. Ever.

Progress shown as:

Securing your launch pad...	
Connecting mission systems...	
Activating security protocols...	
Initialising flight systems...	
Adding to your Fleet...	
Control Tower online...	

 Launch Pad is ready. Begin your mission.

Quality gate: 95/100

FLYWHEEL 3 — SYSTEMS CHECK — LOCKED

Was: Security & Vault Setup

Quality gate: 98/100 Enterprise Grade

The Connection Hub — mission language: One wizard. One session. Connect all mission-critical systems.

Status indicators:

- [Systems Online] — was: Connected
- [Connect System] — was: Connect Now

Security Strength Score — mission language:

- 0-40: Mission Critical Risk
- 41-60: Basic Shielding
- 61-79: Moderate Protection
- 80-89: Strong Systems
- 90-97: Mission Ready
- 98-100: Full Mission Clearance 

Alert when complete: *"All systems are online. Full Mission Clearance achieved. Your crew is protected. Ready to begin Launch Assembly."*

Master Connection Library — Tier 1: Stripe, PayPal, Commission Factory, Anthropic, OpenAI, Gemini, Perplexity, GitHub, Vercel, Supabase, PlanetScale/TiDB, Kudosity, Resend, SendGrid, Postmark, PostHog, Sentry, Datadog, GoDaddy, Cloudflare, Cloudestry, AWS S3, Google OAuth, Apple Sign In, WalletConnect v2

Tier 2 — Connected now, configured in Flywheel 4: ElevenLabs, Manus

Security architecture:

- Three-layer no-plaintext: React → API (AES-256-GCM via KMS) → Database
- Silent Ping on every key
- Dynamic renewable connection leases — TTL by job type
- DLP filter — detects secrets in all input fields
- WebAuthn Passkeys — five-level fallback chain
- WalletConnect v2 — never holds private keys
- Emergency Systems Lock (was: Emergency Lockdown)
- Automated key rotation
- 42-point systems checklist

Nova Wallet — mission language:

- **Mission Treasury** — the Nova Wallet
 - One payment source. Stripe Connect. WebAuthn biometric. Crypto via WalletConnect v2.
 - Per-product cost tracking in Mission Log
-

FLYWHEEL 4 — LAUNCH ASSEMBLY & SIMULATION — LOCKED

Was: Build & Test — The Launch Loop

Quality gate: 90/100

The Launch Sequence — ten stages:

1. **Mission Brief** — describe what to build (was: Idea Input)
2. **Intel Gathering** — research dispatch (was: Research)
3. **Mission Dossier** — brief generation and approval (was: Brief Generation)
4. **Assembly Dispatch** — build engine dispatch (was: Build Engine Dispatch)
5. **Systems Integrity Check** — silent compilation (was: Stage 4.5)
6. **Mission Review** — code review and approval (was: Code Review)
7. **Simulator Prep** — Test Copy creation (was: Test Copy Creation)
8. **Pre-Launch Simulation** — 26 automated checks (was: Pre-flight Checks)
9. **Crew Trial** — founder preview and test (was: Founder Preview Trial)
10. **Launch Clearance** — final approval and quality gate (was: Final Approval) Plus:
Orbit Confirmation — live mirror verification after Lift Off (was: Live Mirror Verification)

Build engine rules:

- Manus writes all code — connects nothing
- No GitHub access for Manus ever
- MANUS_HANDOFF.md warning at every session start
- All code submitted to Mission Control only

- Mission Control reviews, approves, initiates Lift Off

The Three Version Model — active in Flywheel 4:

-  **Orbit** — what customers see, never touched during simulation
-  **Simulator** — isolated safe test environment
-  **Black Box** — guaranteed restore point

Simulation checks — 26 automated: Core systems, payment systems, communications, performance, security and infrastructure. Plain English results. Green tick or Weather Warning per item.

Fix Flow — mission language:

- **Option Alpha** — auto-repair (was: Option A — Fix automatically)
- **Option Bravo** — adjust mission dossier (was: Option B — Adjust brief)
- **Option Charlie** — request ground support (was: Option C — Get help)

After Lift Off: *“Mission successful. Your product is now in orbit.”* Prominent **Return to Black Box** button displayed for 24 hours (was: Revert to Golden Backup) *“If anything feels wrong in the next 24 hours — one tap returns you to your last stable orbit. No mission lost.”*

MANUS_HANDOFF.md — enforced: Launch sequence blocked from completing without updated handoff committed.

Mission Log (Nova Progress Journal): Plain English narrative of everything built. Shareable with investors. Never includes: raw code, vault references, vulnerability details, customer data.

FLYWHEEL 5 — ORBIT & MISSION CONTROL — TO DESIGN

Was: Go Live & Manage

Will cover:

- Lift Off push sequence — connections open, launch, connections close
- Control Tower — health monitoring and status board per product
- Black Box management — version control and restore
- Mission Treasury — cost dashboard

- Mission Control — ongoing management from one dashboard
 - Emergency mode — single purpose critical response screen
 - Crew Rest Mode — no launches during unattended windows (was: Founder-Away mode)
 - Crisis Communications — pre-written status updates bundled with rollback
-

FLYWHEEL 6 — GROWTH TRAJECTORY — PLACEHOLDER

Was: Grow & Market — Blastly Integration

When product reaches orbit — Mission Control prompts: *“Your product is in orbit. Ready to plot your growth trajectory?”* Blastly connects. Mission Blueprint feeds into Blastly as first marketing brief.

DESIGN SYSTEM

Technology stack:

- React + TypeScript
- Tailwind CSS + Radix UI + Shadcn/ui
- Framer Motion — subtle animations

Colour system:

- Primary background: clean white
- Primary surface: deep navy #1a2744
- Accent: amber #f59e0b or mission teal #0d9488
- Orbit/Live: #22c55e green
- Building/Simulator: #3b82f6 blue
- Weather Warning: #f59e0b amber
- Launch Paused/Critical: #ef4444 red
- Inactive/Disconnected: #6b7280 grey

Navigation — iPhone bottom tabs:

1. 🌐 Mission Control
2. 🚀 Launch Pad
3. 🏗️ Assembly
4. 🛡️ Systems
5. 📊 Control Tower

iPad — persistent left sidebar with same five sections

Five core screens:

1. Mission Control — Fleet overview, product cards, status board
2. Launch Sequence — funnel flow, one stage at a time
3. Systems Check — connection hub wizard
4. Control Tower — health monitoring per product
5. Mission Planning — Aria interview and Mission Blueprint

Product card design:

- Product name and domain
- Mission status badge — colour coded
- Status Board score — large number with trend arrow
- One plain English status line
- One action button

Three questions every screen answers: What is this? Is it okay? What do I do next?

Aria's visual presence:

- Co-pilot bubble — floating bottom right above tab bar
- In emergency mode — expands to full-width bottom sheet
- Full screen in Mission Brief interview

THE NOVA ACADEMY — MISSION BRIEFING CENTRE

Seven foundational topics. Available from co-pilot button on every screen.

1. How MyNovaPilot works — the complete mission overview
 2. Understanding your systems — what Full Mission Clearance protects you from
 3. Your AI engines — what they do and why they never fly solo
 4. Your vault and your keys — not your keys, not your crypto
 5. Understanding Lift Off — what going live actually means
 6. Reading your Status Board — what each reading means
 7. Emergency protocols — Systems Lock, Return to Black Box, fix flow
-

MULTIPLE MISSIONS — ONE VAULT, ONE MISSION CONTROL

One vault. Smart key assignment per product in Fleet. One Mission Control dashboard shows entire Fleet.

Fleet overview: Total mission costs, total revenue, net this month, systems clearance level, products in orbit, products in assembly, missions planning.

SUPPORT — GROUND CREW MODEL

- **Tier 1 — Automated** — Control Tower catches issues, emergency systems lock, automatic return to Black Box
- **Tier 2 — Aria** — diagnoses from Flight Recorder, fixes or guides
- **Tier 3 — Ground Crew** — human escalation support
- **Tier 4 — Mission Partner** — Aria prepares plain English comms to third-party providers

The 80/20 split: MyNovaPilot handles 80% of technical complexity. The founder owns 20% — their accounts, their decisions, their mission.

“MyNovaPilot handles the systems. You command the mission. Together — you can build anything.”

INFRASTRUCTURE PRINCIPLES — NON-NEGOTIABLE

1. AI engines write code only — never push to GitHub, never hold credentials, never access Vercel
 2. Keys live in the vault only — vault sends permission, not the key
 3. All connections off by default — open for one job, close immediately after
 4. Every Lift Off requires founder's explicit Launch Clearance
 5. Credentials via onetimesecret.com only
 6. Keys rotated on every crew member offboarding
 7. Manus not in BlastlyAI GitHub org — submits to Mission Control only
 8. No freelancers — AI engines only
 9. MANUS_HANDOFF.md committed before any Launch Sequence marked complete
 10. Three versions per product — Orbit, Simulator, Black Box
 11. Black Box includes database restore point — not code only
 12. No flywheel can be skipped — no quality gate overridden
 13. Scope is SaaS digital products only
-

BLASTLY INTEGRATION

MyNovaPilot builds and manages the product. Blastly markets and grows it.

When Blastly audit identifies problems — MyNovaPilot fixes them via Launch Assembly.
When MyNovaPilot reaches Lift Off — Blastly plots the Growth Trajectory.

They feed each other permanently. Together they cover the complete founder journey from first idea to first customer to growing business.

THE NOVA EDUCATION ECOSYSTEM

Genius Jungle Academy Ages 7 to 16. One platform. Two stages. Stage 1 — What is AI? (ages 7 to 12) Stage 2 — Build your first program (ages 12 to 16) Already built. Connect into Nova ecosystem through MyAria.

Adult education is built into MyNovaPilot through Aria's guidance and Nova Academy. No separate adult product needed right now.

The complete Nova ecosystem:

GENIUS JUNGLE ACADEMY

Ages 7-16 — What is AI + Build your first program

Educator: Aria

↓ grow up ↓

MYNOVAPILOT

Adult founders — Build and launch a real business

Educator: Aria

↓ go live ↓

BLASTLY

Market and grow the business

Guide: Aria

Three products. One educator. One progression from curious child to successful founder.

“We believe anyone with an idea deserves the tools and the education to make it real.”

ENGINE STACK — SIMPLIFIED AND LOCKED

Two API relationships only.

Job	Engine
Aria conversations	Claude API — absorbed by Nova
Market research	Perplexity API — ~\$0.01 per call
Consolidation and report	Claude API — absorbed by Nova
Complex builds	Manus
Surgical edits	Claude Code

Perplexity already routes through multiple models underneath. One call covers all research needs. No separate ChatGPT or Gemini API needed.

ElevenLabs — parked for Phase 2. Aria is text-based at launch.

Cost per validation: approximately \$0.09. Healthy margin at every tier.

PRICING MODEL — LOCKED

Two plans. No free tier.

Plan	Monthly	Credits
Launch	A\$39	2,000
Orbit	A\$99	8,000

Top ups:

- A\$9.50 — 1,000 credits
- A\$24 — 3,000 credits
- A\$49 — 7,000 credits

Credit costs:

- Aria conversations — Free always
- Health monitoring — Free always
- Full validation — 500 credits
- Validation re-run — 250 credits
- Simple build — 600 credits
- Medium build — 750 credits
- Complex build — 1,500 credits
- Testing — 100 credits
- Deployment — 100 credits

Rollover: Unused credits roll over capped at 2x monthly allowance.

The three pricing promises — non-negotiable:

1. Failed jobs never consume credits
2. We never cut off a build mid-task

3. Founders always know the cost before running a job

Brand promise: *"We treat founders fairly."*

NOVA COMMAND CENTRE — REDEFINED ROLE

Nova Command Centre is no longer a project management tool for individual Nova products. MyNovaPilot takes over that role entirely. All existing Nova products — Blastly, HomeSnap, DateReady, HireReady — get imported into MyNovaPilot and managed there.

Nova Command Centre becomes the engine room of MyNovaPilot itself.

What Nova Command Centre monitors: Not founder products. The MyNovaPilot platform itself.

- MyNovaPilot infrastructure health
- Claude and Perplexity API response status
- Credit calculation accuracy
- Validation run completion rates
- Build dispatch and return success rates
- Deployment success across all founder products
- Failed job detection — credits must never be charged on failures
- Error patterns emerging across founder sessions
- Vault encryption integrity
- Connection lease open and close accuracy

The self-improving engine: Every error across any founder session gets logged. Patterns get identified. If multiple founders hit the same error in the same stage — Nova Command Centre flags it as systemic not one-off.

It generates a plain English report: *"Stage 4 validation runs failing for founders using Perplexity API keys created after June 2026. Likely cause: Perplexity changed authentication format. Recommended fix: update API call format in validation engine."*

That fix routes through MyNovaPilot's own Launch Sequence — tested on the Simulator — approved by Trevor — pushed live. MyNovaPilot fixes itself using its own tools.

The loop: MyNovaPilot uses its own Launch Sequence to improve MyNovaPilot. Every

bug fix, every improvement, every new feature goes through the same five-stage process. Tested. Approved. Deployed safely.

The clean distinction:

- **MyNovaPilot** — for founders building and managing their products
- **Nova Command Centre** — for Trevor managing and improving MyNovaPilot itself

One is the product. One is the engine room. Founders never see Nova Command Centre. They only ever see MyNovaPilot.

WHAT TO DO IN THE NEW CONVERSATION

1. Finish Flywheel 5 — Orbit and Mission Control
 2. Write Design Brief Round 2
 3. Write Aria education scripts — Nova Academy seven topics
 4. Lock final pricing document
 5. Manus builds MyNovaPilot — fresh GitHub repository
 6. Lovable refines UI
 7. First Fleet import — Blastly as first test
 8. Connect Genius Jungle Academy into Nova ecosystem via MyAria
-

MyNovaPilot — “If you can think it, you can build it.” “Live in weeks, not months. No developer. No drama. No therapist required.” “You are the pilot. We handle the rest.” “We treat founders fairly.” Master Handoff v3 — Trevor Porter and Claude — July 2026
